

Scatter plot showing the relationship between APD (x-axis) and $\log_{10}(1/\lambda)$ (y-axis) for three groups: normal (blue dots), glaucoma (red dots), and glaucoma with normal IOP (green dots). The plot includes regression lines for each group, indicating a positive correlation between APD and $\log_{10}(1/\lambda)$ for all groups. The regression equations are:

- Normal: $y = 0.577 + 0.146 + 49.778x$
- Glaucoma with normal IOP: $y = 0.577 + -0.015 + 49.778x$
- Glaucoma: $y = 0.577 + 49.778x$
